GM WFG Remediation	Cheryl Hiatt/Ed Peterson
CRA Project Coordinator	James McGuigan
Exponent	Rick Bodishbaugh/Pieter Booth
ENVIRON	C.Y. Jeng/Steve Song

1.0 INTRODUCTION

This Quarterly Progress Report is submitted in accordance with the Bedford Performance-Based Corrective Action Agreement (Agreement) between the United States Environmental Protection Agency (U.S. EPA) and General Motors Corporation (GM), executed on March 20, 2001, and modified on October 1, 2002. This report covers the period of the second calendar quarter of 2006 for the GM Powertrain - Bedford Facility (Facility), Bedford, Indiana. Some of the activities conducted as part of the overall Resource Conservation and Recovery Act (RCRA) Corrective Action (CA) work are being addressed under the CERCLA (Comprehensive Environmental Response, Compensation, and Liability Act) Removal Action Program, pursuant to the Administrative Order on Consent (AOC) between the U.S. EPA and GM (effective July 31, 2003). These activities are described in more detail within the CERCLA Monthly Progress Reports referred to herein.

The next quarterly progress report, covering the Third Quarter 2006, will be submitted on or before October 15, 2006.

2.0 LIST OF COMPLETED ACTIVITIES

The following activities took place and the following documents were prepared and distributed during this quarter:

- Conference calls were held with the U.S. EPA, Indiana Department of Environmental Management (IDEM), the Agency for Toxic Substance and Disease Registry (ATSDR) and Indiana State Department of Health (ISDH) on April 11 and 25, 2006, May 9 and 23, 2006, and June 6, 13, and 27, 2006, to discuss project progress (United States Fish and Wildlife Service (USFWS) was also invited to attend the update calls);
- A conference call was held with the U.S. EPA on April 6, 2006, to discuss the vault submittal;
- A meeting with the U.S. EPA and IDEM was held at the U.S. EPA Chicago, Illinois office on April 24, 2006, to discuss the status of the project and items critical to the project schedule;
- Information sessions for the public were held on April 27, June 7, and 8, 2006, at the Facility. The Community Liaison Panel (CLP) met April 28, 2006;
- East Plant Area Grading Area 4 was originally approved by the U.S. EPA in a letter dated March 1, 2006 based on information submitted by GM on January 4, 2006 (revised January 16, 2006) and February 6, 2006. This approval allowed the staging of <50 mg/kg PCB soils in Grading Area 4. On March 29, 2006 GM submitted revised Grading Area 4 drawings and requested that Grading Area 4 be allowed to temporarily store >50 mg/kg PCB soils in order to begin the excavation of >50 mg/kg soils from the East Plant Area.
 - U.S. EPA gave approval to begin construction of the modifications Grading Area 4 to accept the over 50 mg/kg soils on April 3, 2006;
 - Final revised Grading Area 4 Design drawings were submitted to the U.S. EPA on April 4, 2006;
 - Placement of over 50 mg/kg PCB soil into Grading Area 4 commenced April 29, 2006;
 - The over 50 mg/kg material was removed from temporary storage in Grading Area 4 and placed in the Toxic Substance Control Act (TSCA) Vault on May 30, 2006, to June 1, 2006;
 - Upon removal of the over 50 mg/kg material from Grading Area 4 the filter fabric was removed and Grading Area 4 was restored for use as storage for

<50 mg/kg material. Results from sampling below filter fabric in Grading Area 4 were submitted on June 2, 2006;

- U.S. EPA gave approval to the modifications to the Removal Action (RA) Air Monitoring Plan outlined in the March 9, 2006, proposal on May 18, 2006:
 - A response to U.S. EPA May 3, 2006, comments on air monitoring requirements for the Over 50 mg/kg PCB Soil Removal was submitted May 5, 2006;
 - A response to U.S. EPA May 10, 2006, comments was submitted May 12, 2006;
 - Approval for air monitoring modifications of the East Plant Over 50 mg/kg PCB Soil Removal was given May 18, 2006; and
 - Preliminary air data from the East Plant Area starting on May 19, 2006, for the placement of material from the Area of Interest (AOI) 4 stockpile into the vault, was submitted on June 9, 2006 and weekly thereafter;
- A response to U.S. EPA March 3, 2006 comments on the Over 50 mg/kg PCB Soil Removal was submitted April 5, 2006. The final design report was submitted May 26, 2006;
- The evaluation of flexible membrane material for the leak detection system liner was submitted April 19, 2006;
 - A meeting was held at the Site with U.S.EPA and IDEM on May 4, 2006 to discuss approval of the TSCA Vault. At that time U.S. EPA gave verbal approval to begin filling the vault;
 - South slope reconstruction drawings were submitted May 26, 2006;
 - Placement of over 50 mg/kg PCB soil into the vault began May 19, 2006;
 - IDEM gave approval for on-Site reuse of < 50 mg/kg material May 28, 2006;
 - A Draft TSCA Approval letter was received from the U.S. EPA on May 26, 2006;
 - A request for risk-based disposal approval was submitted to the U.S. EPA May 29, 2006; and
 - Final East Plant Area Vault Design report was submitted to the U.S. EPA June 16, 2006;
- The Willowstick Delineation of Groundwater Flow Pathways near Spring 018C and the Ground Penetrating Radar (GPR) Results for Spring 018 Area was submitted April 13, 2006. Additional, unmarked Spring 018 GPR figures were submitted April 25, 2006;

- A response to May 2, 2006, comments on the GPR memo was submitted June 2, 2006,
- A response to May 10, 2006, comments on the Eosine, Private Wells, and Spring 018 Geophysics was submitted June 2, 2006, and
- A response to May 18, 2006, comments on the 2D-3D Seismic Imagery was submitted June 2, 2006;
- A response to U.S. EPA March 23, 2006, comments on cover system modeling was submitted April 17, 2006:
 - Revised stormwater modeling for the Final Cover System at the East Plant Area was submitted on June 15, 2006; and
- RCRA Facility Investigation (RFI) Work Plan: Addendum No. 13 was submitted to the U.S. EPA on April 20, 2006:
 - Corrected figures for the RFI Work Plan: Addendum No. 13 were submitted to the U.S. EPA on April 24, 2006;
 - A proposal to install seven additional coreholes to be completed under RFI Work Plan No. 13 was submitted on May 19, 2006, and was approved May 19, 2006;
 - The sampling of existing groundwater monitoring wells listed under RFI Work Plan: Addendum No. 13 commenced on May 2, 2006, and was completed on June 21, 2006. This sampling resulted in the collection of approximately 60 groundwater samples and 30 quality assurance (QA) samples; and
 - Drilling for the off-site wells proposed under RFI Work Plan: Addendum No. 13 began on May 3, 2006, and is still underway. Six of the ten proposed wells have been installed; and
- Air monitoring results completed for work in the East Plant Area are presented on Tables 1.1 (PCB) and 1.2 (TSP). Figure 1 presents the sampling locations in the East Plant Area. PCB air monitoring exceedences were reported to the U.S. EPA as the data became available. The first round of preliminary data was submitted to the U.S. EPA June 9, 2006. Additional data will be submitted early in the following quarter with laboratory changes being made to allow for weekly updates to the U.S. EPA in the future;
- On May 3, 2006, a PCB concentration was detected above the action level at Air Monitoring Station 1B (figure 1). The exceedence was attributed to a stockpile of >50 mg/kg PCB material from the East Parking lot placed in close proximity to the air monitoring station. Subsequent to the exceedence, stockpile and excavation

practices were reviewed with the contractor. The following modifications to the stockpile and excavation practices were completed:

- Remove the stockpile from the area as soon as possible;
- Remove the stockpile on days when station 1b is in an upwind location; and
- Mulch exposed >50 mg/kg PCB areas from the excavation areas, stockpile areas, and vault at the end of each day.
- Station 1b is currently located immediately adjacent to the area where soil was being stockpiled. Station 1b will be moved out to a perimeter location at the fence line to obtain a more realistic air measurement;

Additional sampling was completed on the days following to monitor the effectiveness of the modified procedures. No further exceedences were detected at this location during the movement of that stockpile;

- During June 2006, PCB concentrations were detected above the action level at Air Monitoring Stations 1b, 22b, and 31 (Figure 1). The exceedence was attributed to excavation ≥ 50 mg/kg PCB material from the east parking lot and former Zipp lot and placement of the material into the vault. Subsequent to the exceedences, stockpile and excavation practices were reviewed with the contractor. The following modifications to the stockpile and excavation practices were completed:
 - Evaluate wind direction and adjust excavation activities if the downwind air monitoring station is in close proximity of the excavation;
 - Increase dust control on the east plant stockpiles/excavations;
 - Increase the amount of mulch used to cover the stockpiles/excavations/vault;
 - Mulch or tarp all excavations/backfill/stockpiles (<50 mg/kg PCB and ≥ 50 mg/kg PCB) at the end of each day;
 - Eliminate casting material to move material toward the dozer for compaction when working in the vault. Rather, material will be gently placed;
 - Tarp excavations/backfill/stockpiles rather than mulch these areas when additional work is not anticipated for an extended period of time;
 - Minimize the spray of the water truck as it wets GM Drive to minimize disturbance of soil on the shoulders and grassed areas just off the road;
 - Move Station 1B so that it is closer to the property line between GM and Parcel 401;
 - Move the vault dumping ramp from the northwest corner of the vault to the southeast corner of the vault;
 - Mulch the excavation and vault throughout the day to button up areas as soon as work is completed, rather than wait until the end of the day;
 - Utilize a higher powered mulching machine;

- Evaluate different types of mulch; and
- Evaluate other potential contributing activities.

Daily air sampling is conducted to monitor the effectiveness of the modified procedures.

GM also continued to evaluate specific sampling requests made by residents in this quarter and collected samples, where appropriate, based on knowledge and location of the property relative to the plant and/or contamination. These analytical results (once validated) have been included in the stream project data packages distributed to the residents, and to U.S. EPA and IDEM. GM will continue evaluating additional areas when requested by residents, and sampling, as appropriate, on a case-by-case basis, during the next reporting period.

The March 2006, April 2006, and May 2006 CERCLA Removal Action Monthly Progress Reports were submitted during the 21nd quarter of 2006.

3.0 SUMMARIES OF ALL CHANGES MADE IN THE CORRECTIVE ACTION (CA) DURING THE REPORTING PERIOD

The following changes were made to the CA during the reporting period:

- Approval to start construction of Grading Area 4 was granted on April 3, 2006;
- Approval of the modification to the Removal Air Monitoring Plan was granted on April 4, 2006;
- Submission of the final design drawings for Grading Area 4 on April 4, 2006;
- Submission of the response to U.S. EPA comments on the Over 50 mg/kg PCB Soil Removal on April 5, 2006;
- Submission of the Willowstick delineation of groundwater flow pathways near Spring 018C on April 13, 2006;
- Submission of the GPR Results for Spring 018 Area on April 13, 2006;
- Submission of the response to U.S. EPA comments on the Cover System Modeling on April 17, 2006;
- Submission of the evaluation of flexible membrane material for the leak detection system liner on April 19, 2006;
- Submission of RFI Work Plan: Addendum No. 13 on April 20, 2006, and the submission of information regarding additional RFI Work Plan: Addendum No. 13 borings on May 19, 2006;
- Submission of the over 50 mg/kg PCB Soil Removal Final Design Report on May 1, 2006;
- Approval to begin placement of over 50 mg/kg PCB soil in the Vault was granted on May 4, 2006;
- Submission of the response to U.S. EPA comments on the Air Monitoring Requirements for the Over 50 mg/kg PCB Soil Removal on May 5 and 12, 2006;
- Approval for on-Site use of <50 mg/kg material was granted by IDEM on May 25, 2006;
- Submission of south slope reconstruction drawings on May 26, 2006;
- Submission of response to U.S. EPA comments on Spring 018 investigations was submitted June 2, 2006;

- Submission of the East Plant Area Preliminary Air Monitoring Data, June 9, 2006;
and
- Submission of the East Plant Area Vault Design Report, June 16, 2006;

4.0 COMMUNITY RELATIONS

GM continues to maintain the toll free information telephone number. Individual meetings continue to be arranged to discuss sampling results with individual residents as requested.

A special session was held with owners of properties on and adjacent to the truck transportation routes on the evening of April 27, 2006 to update residents of the project status and to respond to questions regarding the use and maintenance of public roads.

The CLP meeting occurred in this quarter on April 28, 2006. The CLP was formed to provide additional communication avenues for the community and the meetings are currently being held at the GM Facility approximately every three months or more frequently if information on the project changes significantly. The CLP meeting minutes are posted on the GM website at www.BedfordPowertrainCorrectiveAction.com.

Quarterly meetings to review project status, are held both with the neighbors along the creek and around the plant, as well as with the general public. Quarterly meetings were held during this reporting period on June 7 and 8, 2006, at the Facility. The June 7, and 8, 2006, meetings were held from 6:30 PM to 8:00 PM at the Bedford Facility as a regular information session with presentation boards available for review. Presentations for the meetings are posted on the web site at www.BedfordPowertrainCorrectiveAction.com.

The Information Center, located at the plant lobby, is available by appointment through Ms. Becki Akers, GM Communications, at the project toll free number 866-223-0856. The repository located at the Bedford Public Library remains open at normal business hours. All data in the repository are also located on the aforementioned web site.

5.0 CHANGES IN PERSONNEL DURING THE REPORTING PERIOD

Dan Nelson has taken over day-to-day duties of CRA's Safety Oversight from Mark Baker for the project under the supervision of Jeff Maranciak. Also a number of field personnel have been rotated out of the field activities.

6.0 PROJECTED WORK FOR THE NEXT REPORTING PERIOD

Work projected for the next reporting period includes:

- Conduct a Community Liaison Panel Meeting in August/September 2006;
- Conduct a neighborhood information session in August/September 2006, on a date to be determined;
- Conduct a general public information session in August/September 2006, on a date to be determined;
- Prepare and distribute Fact Sheet 14 in August 2006;
- Continue with RA activities on Parcel 22 and downstream parcels;
- Continue monthly monitoring of groundwater elevation measurements;
- Continue the evaluation of RFI soil and groundwater data;
- Continue sampling and well installation for RFI Work Plan: Addendum No. 13;
- Complete Western Tributary IM Work Plan on Parcels 60 and 61;
- Commence Northern Tributary IM Work Plan;
- Submit an IM Work Plan for the Plant property areas west of GM Drive;
- Submit an IM Work Plan for Spring 018C;
- Continue work outlined in RFI Work Plan: Addendum No. 8 for the additional dye trace studies in the AOI 4 and AOI 6 areas in support of the East Plant Area IM;
- Submit RFI Work Plan: Addendum No. 14 for shallow bedrock dye trace tests on the West Plant Area;
- Submit the final logs and sampling results for RFI Work Plan Addendums 3, 4, 5, 6, 7, 8, 9, 11, and 12;
- Continue excavation of over 50 mg/kg PCB materials in the East Plant Area and placement in the East Plant Area Vault;
- Submit Final (100%) East Plant Area Cover System Design to the U.S. EPA review and implement as soon as practical upon approval of the Draft Design;
- Submit an Addendum and revision to the Quality Assurance Project Plan (QAPP) addressing requirements for the vault operations;
- Complete Pre-final (95%) East Plant Area Trench Design and submit for U.S. EPA review;

- Submit a design for the Source Removal System on AOI 8 and implement a pilot system; and
- Continuation of placement of the < 50 mg/kg PCB Removal Action soils in the East Plant Area as grading fill.

**7.0 COPIES OF DAILY REPORTS, INSPECTION REPORTS,
LABORATORY/MONITORING DATA**

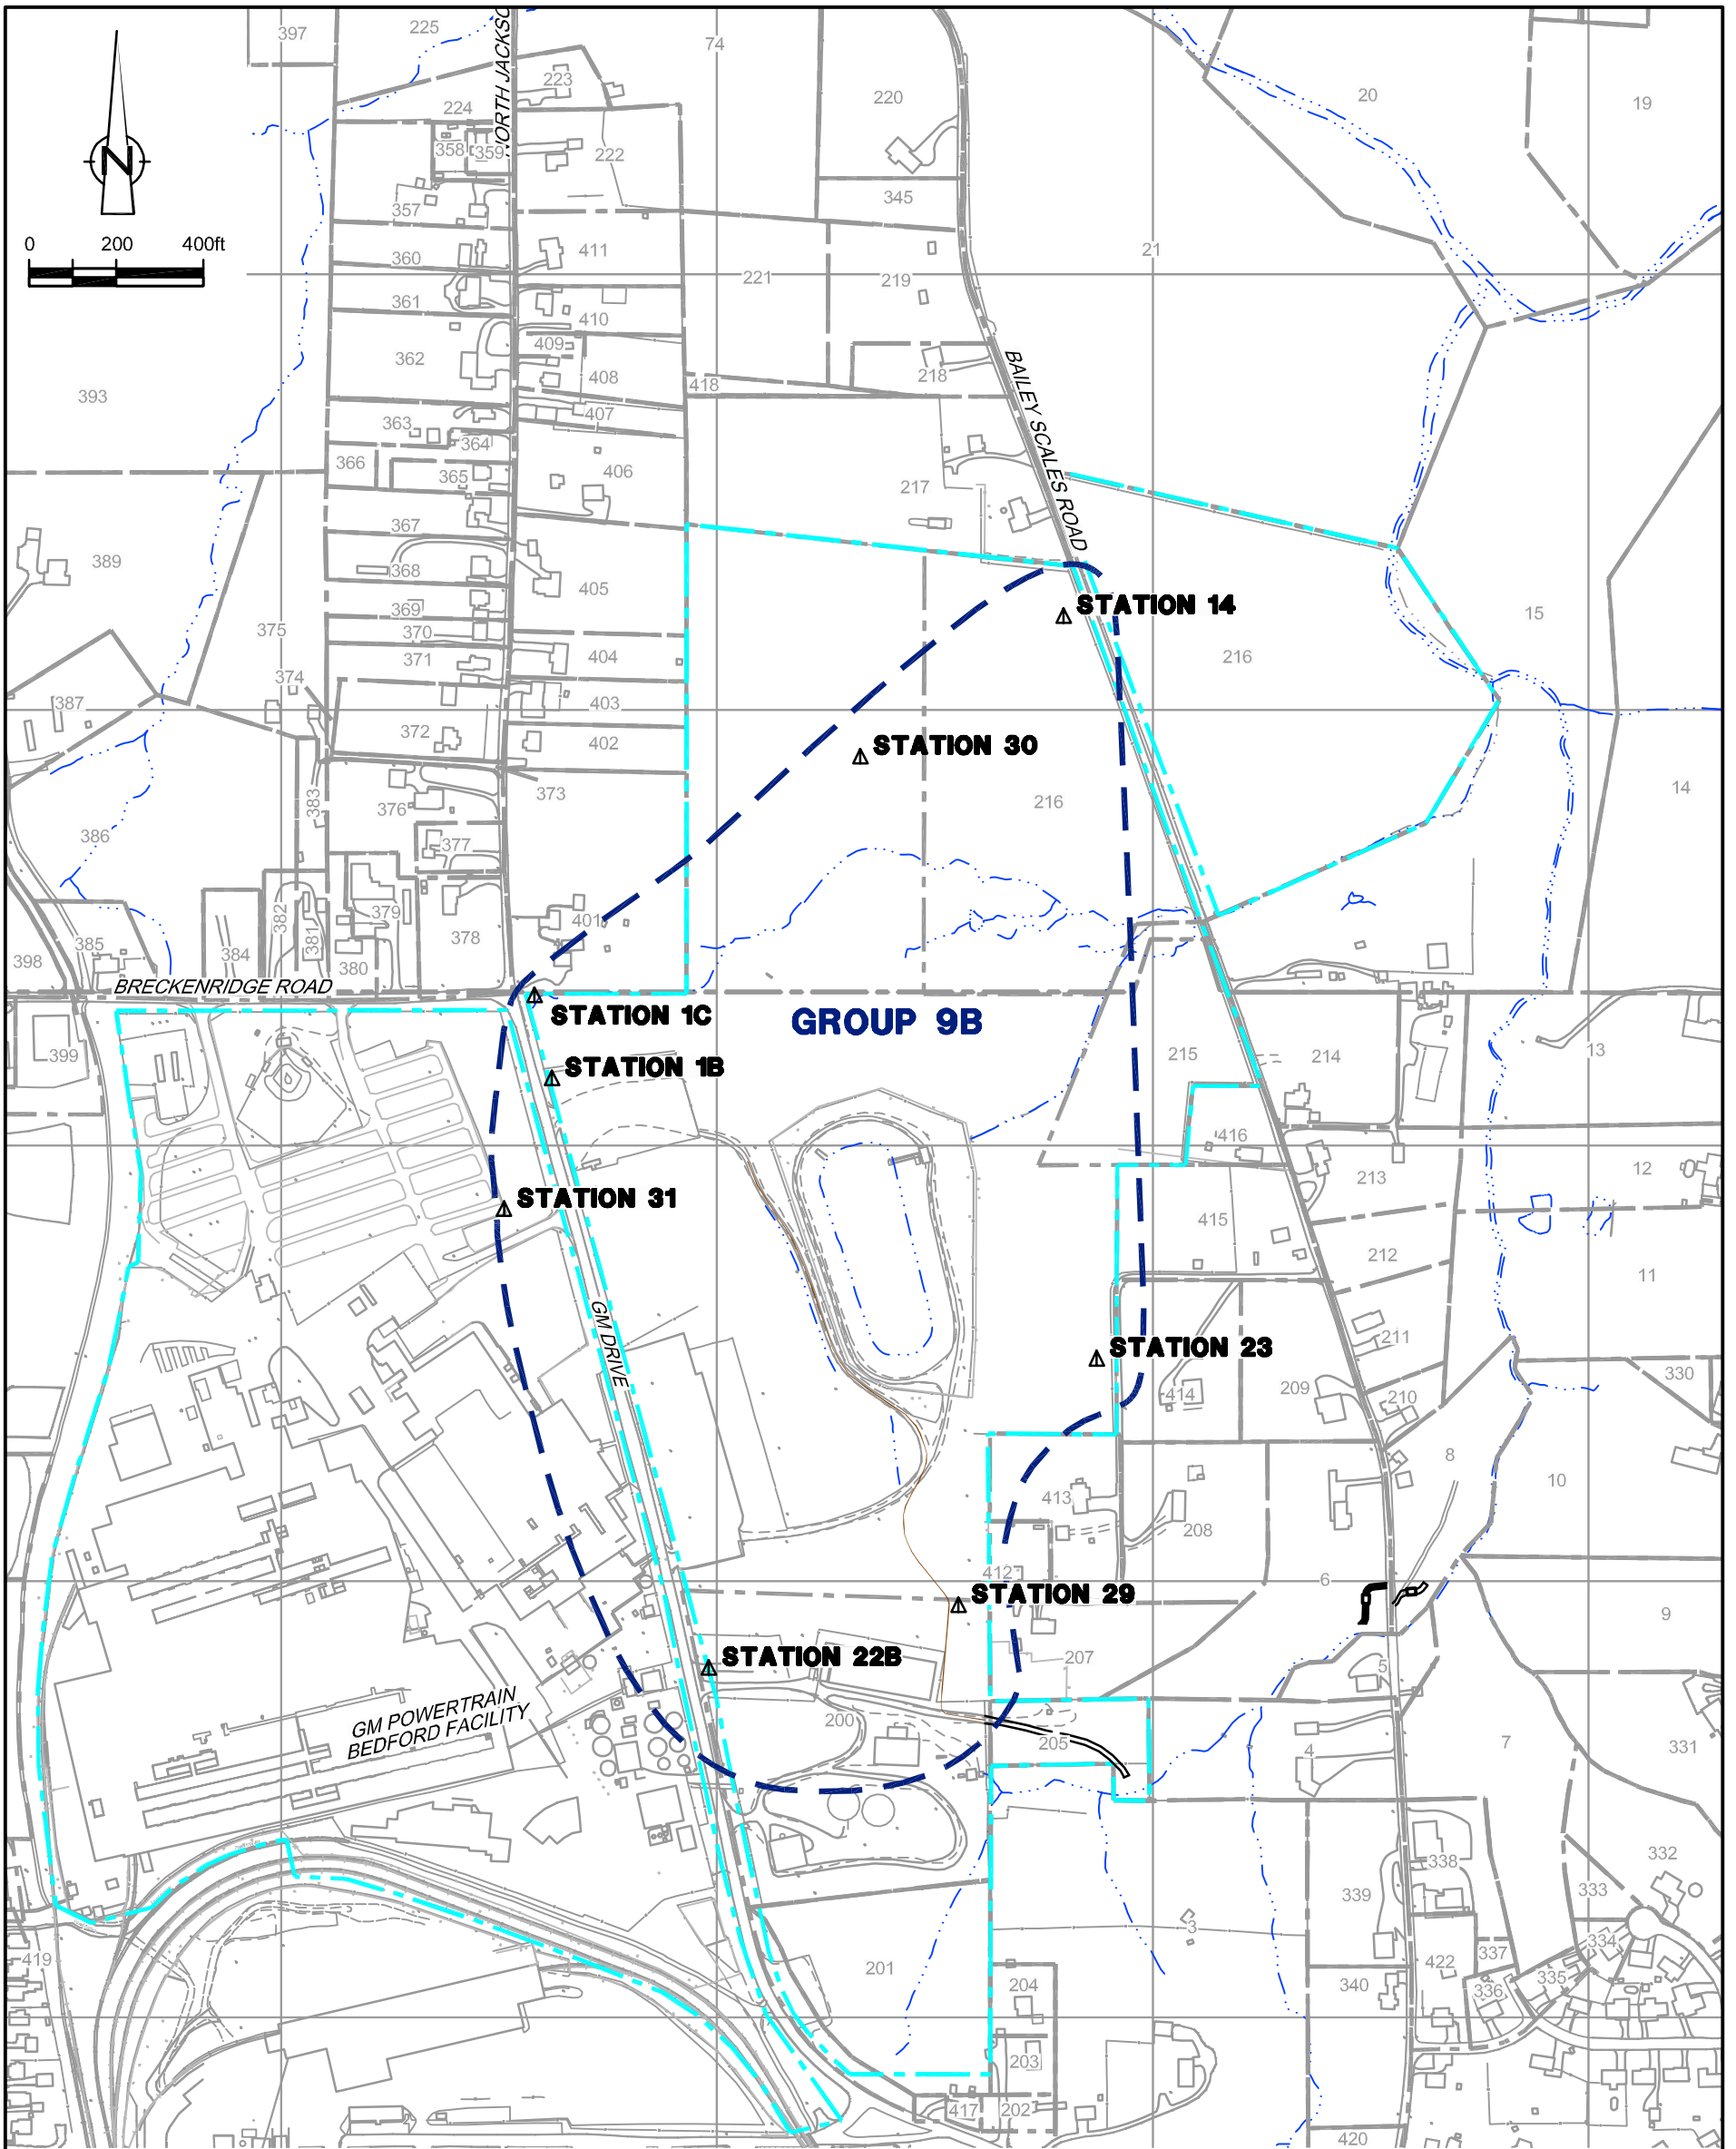

Figure 2 presents the verification sample results for work completed on Parcel 57 (analytical results are provided on Table 2).

Packages of analytical data from Creek remediation verification sampling have been submitted monthly as they become available, after validation, in the monthly reports, and will continue to be submitted during the next reporting period. Any other sampling data collected during the quarter will be submitted under separate cover once validation is completed.

UCL Calculations		Not Required Based on Sample Results			

GENERAL NOTES:

- (1). Cleanup Criteria
 - a.) Soils to < 1.8 mg/kg.
 - if all results are < 5.0 mg/kg, the cleanup objective can be verified in the Verification Area (approximately 100ft x 200ft) by calculating the Upper Confidence Limit (UCL) of the average concentration using statistics, if the UCL is < 1.8 mg/kg the cleanup objective will be met for the given Verification Area. A value of 0 mg/kg is used in the UCL calculation for sample grids excavated to bedrock.
 - b.) Sediments to < 1 mg/kg.
- (2). Composite sidewall samples were collected in the location where the sidewall of the excavation exceeded 6 inches in height.
- (3). The surficial confirmation samples (8 composites per Verification Area except where bedrock is encountered) were collected after the soil/sediment removal was performed.
- (4). A value of 0 mg/kg is used for ND in the calculation of Total PCBs. [ENVIRON]
- (5). For UCL calculations, Aroclors 1016, 1221, and 1232 have been assigned a ND value of 0 mg/kg based upon their lack of presence in the data.
 - UCL calculations are performed on Aroclors 1242, 1248, 1254, and 1260 using the half the quantitation limit where ND results are reported. [ENVIRON]
 - UCL calculations included both floor and sidewall samples.
- (6). Data used for UCL calculation result shown are validated.
- (7). The sampling round (e.g. R1, R2, etc.) correlates to Verification Area grids or sidewalls where additional rounds of excavation were completed due to exceedances of the cleanup criteria.
- (8). Property boundary locations approximated from the Lawrence County survey plats. Locations may not accurately represent the true property boundaries.
- (9). The verification figure is presented to show progress for this reporting period. Excavation verification may not be complete as statistical analysis or further excavation may be required.

Notes:

* - Results not reported due to machine malfunction

NR - No result because machine was not setup

⁽¹⁾ - Exceedance primarily attributed to >50 ppm material placement into the vault and East Plant excavation.

⁽²⁾ - Exceedance primarily attributed to East Plant excavation and high pressure spray from water truck.
